

Illuminating the future from Japan

*Corporate Profile*

**PRIME STAR**  
PRIMESTAR CO., LTD

# Making Japan brighter and more energized through “SETSUDEN(Energy-saving)”

The reduction of electricity consumption is becoming an important issue for households and cooperations alike. Through the use of energy saving lighting such as LED lighting technology, our company delivers lighting solutions for your everyday life which not only contributes to lowering energy costs but helps preserve the environment. Our mission is to meet the constantly changing needs of our customers through optimal lighting solutions.

We provide you with a diverse range of quality products and services, sourced from around the globe. Our philosophy is to not only be a provider of products, but also an advisor to guide you through the process.

President & CEO

下田 知代

# [ 3 Stars of PRIMESTAR ]

## One Stop

*One Stop*

At PRIMESTAR we not only carry hundreds of our specialized proprietary lighting fixtures, but available lamp products by other brands, resulting in a portfolio of roughly 9,000 items. This guarantees customers to find lighting solutions that are optimal to their wide and diverse needs.

## Tailor-Made

*Tailor-Made*

In rare situations where our product line-up does not suffice, we have a custom program to supply our clients with one-of-a-kind solutions. We can accommodate various needs including power consumption, brightness and color temperature, even in small production lots. This program spans across all lamp varieties such as LEDs, induction lamps and CCFLs.

## Smart Fixed Price Plan

Zero initial investment plan!

*Lease Service*

Our "smart fixed price plan" enables you to have a cost effective lighting and energy solution with zero initial investment. You can choose to pay in installments that correspond to the reduced amount of your monthly electricity bill.

## Installation Examples

We provide various lighting solutions for offices, stores, commercial facilities, gas stations, and other facilities.

## Office

Companies are installing LED lightings for their offices in response to the Minamata convention 2020, cost efficiency and CO2 emission reduction requirement. We deliver not only electricity consumption reduction, but also comfortable office space. LED lighting "Reach" series is one of our LED lighting brands equipped with super reflector functionality. Reach solves the glare problem while adhering to excellent uniformity. This reduces the so-called Blue light effect thereby improving the overall office environment.

# Reach

New era of LED  
It's not just about brightness  
Realization of comfortable light

## Store/Commercial Facilities

Halogen and bulb lamps have been used by many stores and commercial facilities. The "LINDA" series can act as a replacement, thereby maintaining brightness, natural colour, size and shape while reducing power consumption significantly. We also provide outdoor LED lighting for signs and exterior.

## Gas Stations

Visibility from a long distance is one of the most important issues for gas stations. WS series canopy lights are diverged to all directions and thus can attract more attention.

These WS series are made in Japan 100% due to the sourcing of specialized microchips and last up to 90,000 hours.

## Factory/Other types of facilities

The Minamata Convention on Mercury is a global treaty to protect human health and the environment from the adverse effects of mercury. Products including lamps with mercury will be banned from 2020. LED lighting technology is the ultimate way to switch from mercury lamps. PRIMESTAR will help you upgrade to the optimal lighting solution.

# The PRIMESTAR sales network is spreading across Japan

We not only have a strong distribution network throughout Japan which continues to still grow, but are expanding our ability to handle the necessary construction work for installing our products. The "SETSUDEN STATION (Energy Saving Station)" - located in the heart of Tokyo (Akasaka) - is a showroom where you can see our actual products. Our experienced staff will provide you with consultation regarding installation. Please feel free to contact us with any questions you may have.

## PRIMESTAR's production base is spreading around the world.

We are outsourcing production at ISO9001, ISO14001 certified production factories in Japan, China, Korea, Taiwan, etc. Our products are also being exported to the US and European countries. We are making global standard reliable products that have cleared certification in various countries around the world.

## Meeting your needs with comprehensive line-up of products.

We are introducing a wide range of products that include our company's original products and products made by domestic/overseas major lighting makers, resulting in an extensive line-up of over 9,000 energy-saving lightings. Our line-up consists of LED lighting, CCFL, electrodeless lamps that are friendly to the environment and eyes, etc. Our energy-saving simulation system "Make" will allow you to easily assess the energy savings you can expect from adopting our solution.

## Line-up of products that are safe and certified.

We are providing reliable lamps that are manufactured at production factories certified with high quality assurance and coordinated with technical staff. We are implementing thorough quality assurance measures such as undergoing performance quality inspection by outside agencies, countermeasures against noise that passed the standard of The Electrical Appliances and Materials Safety Act, and various countermeasures against radio wave interference. We are meeting a wide range of customer needs with products that passed both international and Japanese standards.

## First time in sales? No problem! Hosting of sales workshop

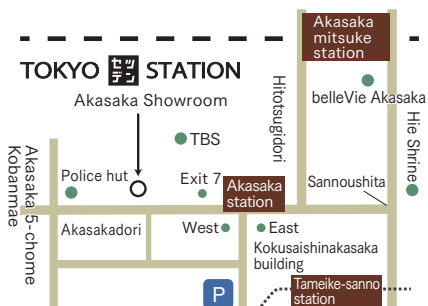

If you are entering the LED lighting sales market for the first time, having a hard time to educate staff through your own company, etc., we have the solution just for you! Our company is offering a solid workshop program to train your sales staff. Our experienced staff will present detailed know-how on topics such as market environment, cost simulation, sales talk, on-site research, etc. We are also conducting on-site workshop and sales accompaniment. Please feel free to contact us with any questions you may have.
